

Device Plan Change SOP

Oct 8, 2026 · @nandhiv

For every **Plan Change** row in the daily "Device billing changes – Geotab & Zenduit" email: run the checks in order and stop at the first that applies.

Stop at the first check that applies; each ends in one action

plan change decision flow · 3 checks, 4 actions

The checks

#	Check	Yes → do this	No →
1	A plan change request exists for the device	Update the recurring invoice to the requested plan	Check 2

#	Check	Yes → do this	No →
2	Geotab only: the device is an RMA replacement or auto-activated	Fix the device plan in Geotab admin (MyAdmin) – the device is wrong, not the invoice	Check 3 (Zenduit devices go straight to 3)
3	A quote exists for the device and its plan matches the new plan	Update the recurring invoice to match the quote	Check 4

4. No quote, or the plan differs: open the device timeline (MyAdmin history or ZenduONE Admin audit log), see who changed the plan and when, contact that person, agree the next step and note it on the Zoho Desk ticket the email created.
